$360B	500+	$200M+	6.5x
AUM/AUA Platforms Overseen	Employees & Consultants Led	Technology Budget Owned	Asset Growth Delivered

Marianne Bachynski is a Board Director and C-suite Technology Advisor with deep expertise in Enterprise Technology, Data Governance, Cybersecurity Risk, and large-scale transformation across global financial institutions. She brings more than two decades of experience overseeing mission-critical platforms, regulatory programs, and technology-enabled business change in complex, highly regulated environments. Marianne most recently served as Chief Information Officer for Investments, Enterprise Systems, and Data Shared Services at Corebridge Financial (formerly AIG). In this role, she provided oversight and strategic leadership during the company's 2022 IPO and separation from AIG, guiding three concurrent transformation programs across Investments (BlackRock Aladdin), Treasury and Finance (SAP), and HR (Workday). She oversaw platforms supporting $360 billion in assets under management and administration, a global team of more than 500 employees and consultants, and an $80M+ technology portfolio. Marianne established Corebridge's Data Shared Services function and analytics center of excellence, modernizing the enterprise's data and reporting capabilities on Snowflake, Power BI, and Tableau. She also represented the Enterprise CIO in a Federal Reserve-mandated cybersecurity remediation, aligning previously siloed teams to close high-risk gaps under time-sensitive regulatory scrutiny.

Prior to Corebridge, Marianne held senior leadership roles at FIS Global, Rabobank, Citigroup, and Morgan Stanley, where she led enterprise technology, operations, and data functions across capital markets, wholesale banking, and institutional financial services. Her experience includes designing modernization strategies for a $1B+ capital markets business, leading a Federal Reserve-mandated client onboarding and data-quality transformation, and overseeing global technology functions supporting institutional products. Earlier in her career, she built Morgan Stanley's Investment Management Technology organization from the ground up across 12 global locations, integrating four acquired firms onto a single platform and delivering more than $40M in annual savings through a data-centric modernization strategy.

Marianne holds MIT Executive Education credentials in Artificial Intelligence and Big Data and co-authored a chapter in the MIT AI Anthology with peers from her MIT cohort from across the globe. She is the author of *Fit for Uncertainty*, focused on leading organizations with clarity and confidence amid mounting complexity and constant change in an AI-driven environment. She is an active member of the Private Directors Association and the Virtual Advisory Board.

Based in New York City, Marianne is pursuing Board Director**,** C-suite Advisory, and Fractional CIO roles across financial services, technology, and other data-intensive industries.
